

Job brief

Software Engineer – Python

Are you a passionate Software Engineer? A quick learner capable of adapting to changing requirements? Has a passion to make a difference? Interested in being part of a globally distributed team working on solutions and services that will be used by millions of users every day?

Nuventure is waiting for you! We are hiring Software Engineers with a high passion and talent for coding. This role is available to senior professionals however, attitude trumps everything else.

Responsibilities:

- Contribute to new and on-going projects based on web services and mobile apps by implementing best practices with minimal technical debt.
- Support the project management team with analysis and estimation.
- Work closely on projects with a major impact across various client and in-house projects.
- Perform hands-on coding along with the team members.
- Work in a highly experienced team that favours hands-on over indirect action.
- Dive into difficult problems and successfully deliver results on schedule.

Qualifications:

Must Have

- At least 3 years of experience building, scaling and maintaining production systems written in Python, Django or related frameworks.
- Deep understanding of the full software and product development lifecycle, from UX and design through to deployment into production and phase-out.
- Professional experience working with multiple programming languages.

- Experience with a range of typical backend systems such as all kinds of data-stores, queues etc.
- Experience building and managing web services and APIs for mobile apps.
- A healthy aversion to deploying on Fridays or after 16:00.

Nice to have

- If you have experience with Ruby or Go
- If you have worked with IoT technologies
- Familiar with Docker, containerisation
- If you love Linux and have Devops skills
- If you own a blog or domain name

Salary – up to 6 LPA

Job mode – Hybrid

Notice period – Prefer someone with shortest notice period but up to 3 months is okay.
